

Pushover

Done P Open

Pushover is a simple push notification service that integrates easily into web apps like IFTTT, network monitoring systems, security cameras, shell scripts, IoT devices, and anything else that needs to send alerts to your iPhone, iPad, Desktop, and other robot-like mobile devices. App has a free 30-day trial and unlimited usage beyond the trial requires a one-time in-app purchase.

Pushover includes an Apple Watch app and complications so you can push custom data straight to your watch face with our Glances API.

Visit <https://pushover.net/> to find apps, plugins, and services that support Pushover, or get an API key for your own app.

Activation Energy

Activation energy (E_a) is the minimum energy needed to start a chemical reaction.

A lighter supplies the activation energy to make wood burn.

The diagram illustrates the concept of activation energy using a campfire. On the left, a pile of sticks is shown with a lighter applying a flame. An orange arrow points from the lighter to the sticks, representing the input of activation energy. On the right, the sticks are fully burning, representing the reaction after the activation energy barrier has been overcome.

Kaj je Pushover?

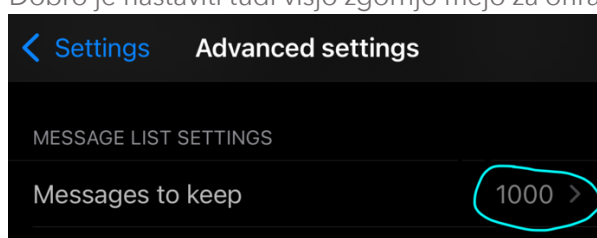

Pushover je **zanesljiva storitev na strežniku** in hkrati **aplikacija za pametne telefone**. Sama od sebe ne pošilja sporočil, ampak jih sprejema od tretje stranke, v našem primeru od **PLAC-a**. Torej imamo tudi mi program na svojem strežniku, ki pred vsakim dogodkom posreduje sporočila Pushover storitvi, ta pa nato obvesti uporabnike na njihove telefone. Učinek je podoben, kot če bi imeli svojo aplikacijo. Svoje aplikacije za telefone nimamo, ker si strateško pomagamo z že narejenimi kvalitetnimi storitvami. **Vstopnice za računalniške dogodke v 2026 boste prejeli preko teh sporočil.** Dogodki so brezplačni za vse z aktivno Pushover namestitvijo. Datumi dogodkov bodo posredovani samo preko te storitve.

1. **Namestite aplikacijo** (iščite "Pushover" v appstore ali **skenirajte QR kodo**).
2. Registrirajte se z emailom in geslom.
3. V nastavitvah najдите **User Key** in kliknite nanj, da se skopira na clipboard:

4. Posredujte vaš **User Key** preko emaila na **register@uniqpath.com**. **To je to!**
5. Aplikacija Pushover deluje en mesec, nato je potrebno prispevati \$5 za strežnike in razvoj (podjetju Pushover LTD.). Plačate lahko z Apple/Google Pay ali PayPal. Vaša naprava se s tem aktivira za vedno in nadaljnjih plačil podjetju Pushover več ni.
6. Dobro je nastaviti tudi višjo zgornjo mejo za ohranjanje sporočil na telefonu:

7. **Se vidimo :}**
